

Radars Computer Specialty

Is your computer slowing down? Not sure why, getting errors?

You are not alone. A lot of people invested in a computer and are now having problems. The price of repair shops is daunting and often you are in the dark about what is going on.

Need more Memory, a new bigger hard drive for pictures - video - or MP3 music files, a new video card for playing today's high end games? Do you need software installed and are not sure how to go about it. No problem. Give me a call and I can do a basic diagnostic of your current system, check to see if your system can handle what you would like to do and install whatever you need. I will also be honest with you as to whether or not it is even worth "upgrading" your machine or if my services would be a waste of your money and time. I also have a list of free software that you can download for your own use:

•Upgrade existing system

Knowledgeable install of hardware and / or Software, including, but not limited to: video, audio cards, memory upgrades, new hard drives, scanners, digital cameras, PDA's, MP3 Players. Office applications, photo programs, video editing, mp3 creation and editing, and more.

•Consult on Purchasing Needs

Do you need to upgrade? Do you need a new system to do what you want to do? Need consulting on system needs and system purchasing? If it will not be worth your money and time to upgrade your current system, I will let you know.

•System Maintenance

From Hardware to Software maintenance, Radar's Computer Specialty is your first call. Is your system slowing down and you don't know why, not a problem, diagnostics and repair available. Are you running out of disk space, we can work with your current configuration or install a new drive.

•Networking

Do you have more than one computer? Would you like to be able to share the resources of the main computer with the others? You can have a home network with or without broadband. This will allow you to print from any computer to a single printer, share files between systems, share a high speed connection. A network can be wired or wireless, would you like the freedom to use your laptop anywhere in your house and still have the same connectivity as a wired network? There are many products that make this a reality, just let me know your needs.
